POWER LINE FILTER

Model 1116

- * Optional built-in lightning arrester.
- * Designed specifically for Community TV Systems.
- * Full 5 amp rating.
- * Line protection fuses.
- * Protected with Military Specification Plating.
- * Silver plated filter elements where it counts.
- * Simplified mounting.

Model 1116 Power Line Filter represents the incorporation of several features found to be both desirable and mandatory after several years of experience with existing filters.

Look at the features!

1. **Mica Capacitors:** The delicate and fragile ceramic feedthru capacitors used in other type filters have been replaced with rugged Mica capacitors.
2. **Protected Filter Elements:** The "sore thumb" type coils have been replaced with coils that are enclosed inside a metal cartridge together with the capacitors. You can literally STEP ON our filter cartridges without damaging it. The cartridge itself is SILVER PLATED for good conductivity at the filter elements.
3. **Full 5 ampere Load Rating:** There are periods when the 5 ampere rating is welcome. A monitor or solder iron can be plugged in without fear of overloading.

Quality is our Standard
